C
Localised sites in four guide-pool libraries
a site sits ≥ 5× above the lowest of the
other libraries at that base; four unreplicated
libraries, so this is a descriptive contrast

Position in the amplicon (bp)
five sgRNAs on one amplicon; each track scaled to its own peak, whose
height in mismatches per 10³ is given. Rates, not calls. The deposit
does not publish protospacer coordinates, so guides are not drawn.

D
An AID-diversified TCR
Mutation frequency per 10³
