A J_H4: germinal-centre B cells from mice

Wild type / AID-null
3 mice per group

→

Peyer's patch B cells
B220 $^+$ GL7 $^+$ Fas $^+$

→

High-fidelity PCR
J_H4 intron amplicon

Nanopore: reliable interval 90–1,230 (1,141 bp)

Sanger comparison: 101–629 (529 bp)

B N114: fixed V-region substrate in hybridoma subclones

pMX-Aicda / empty vector
GFP and puromycin

→

GFP-high selection
Limiting dilution

→

3 subclones per vector
1 month before DNA collection

Nanopore V-region amplicon: ~655 bp; analysed interval: 21–635 (615 bp)

Computational processing is shown in Figure 1; quantitative read accounting is in Figure S26.
