
A
The whole amplicon from each read (positions 90–1,230)
529-bp Sanger window
Wt (mean; thin, mice)
Aicda−/− (mean)
Unique variants per 10^5 bases
JH4 amplicon position (bp); 50-bp bins
B
AID targeting vs error
targeting index
Wt 1.22–1.36
error 1.00
Wt calls
Aicda−/− mismatches
Per position, relative to mean
least
most
5-mer mutability quintile
C
Clones from the V(D)J junction
per 10^3 bp, read-→ clone-weighted
Wt2
2.8 → 16.3
Wt3
22.5 → 24.9
Wt4
4.9 → 5.3
Reads with a junction, by clone (%)
D
One Wt3 clone: 69 reads, 70% of mutated reads fit one tree
G:C transition
G:C transversion
A:T
Mutations since the clone's unmutated ancestor
