
A
The whole amplicon from each read (positions 90–1,230)
529-bp Sanger window
Wt (mean; thin, mice)
Aicda−/− (mean)
Unique variants per 10^5 bases
JH4 amplicon position (bp); 50-bp bins
B
AID targeting vs error
targeting index
Wt 1.22–1.36
error 1.00
Per position, relative to mean
Wt calls
Aicda−/− mismatches
least
most
5-mer mutability quintile
C
Clones from the V(D)J junction
per 10^3 bp, read- → clone-weighted
junction read in 79%
Wt2
2.8 → 16.3
junction read in 72%
Wt3
22.5 → 24.9
junction read in 55%
Wt4
4.9 → 5.3
Reads, by clone (% of 500)
D
Read-level reconstruction of one Wt3 clone (69 reads)
48 of 69 reads (70%) fit one path, 21 do not; numbers, reads carrying each node (nested)
G:C transition
G:C transversion
A:T
Mutations since the clone's unmutated ancestor
