A
Sμ amplicon, 651 bp
(the bundled reference)
Sμ repeats: where AID acts
300-bp single-end read
(6 of 9 wild-type libraries)
R1 of a pair
(all 9 AID-null, 3 wild-type)
R2 of the same pair
mates do not overlap: only 9–21% of pairs merge
window B: the stretch every library reads
window C: the repeats, paired libraries only
B
Window B: the shared 216 bp
wild type
Aicda−/−
AID-null at background throughout;
replicates vary more
than treatments do

wild type
(n = 3)
Aicda−/−
(n = 9)
every library here is paired, so no layout difference; but one wild-type
library per treatment against three AID-null, pooled as a descriptive contrast
