

Nanopore

Sanger

Illumina

PacBio

samples

AID-null controls

same sequencing run

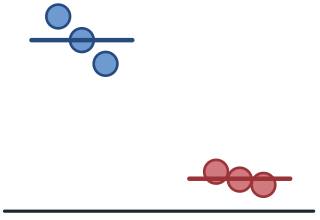

SHMtrace

reads: each candidate mutation tested against the errors of matched AID-null libraries

Sanger: quality-filtered counts; background reported

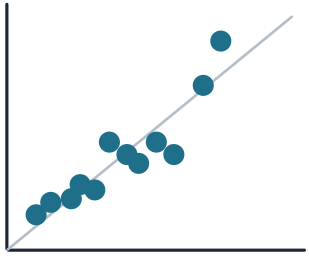

groups compared animal by animal

Low background

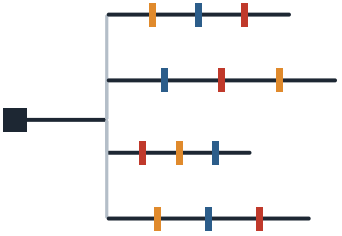

64–90% fewer control calls than an uncorrected rule

Pooled spectra

pooled substitution spectrum, nanopore vs Sanger, r = 0.92

Clones and trees

read-level reconstruction from full-length reads
